EXECUTIVE SUMMARY

This wage and salary survey was commissioned by the American Society of Radiologic Technologists (ASRT) in support of the profession in January 2001. The ASRT Education and Research Department assisted in the development of the survey instrument and research methodology. They commissioned Savitz Research Solutions to administer the project, tabulate the data and create the report. Twenty-nine thousand, nine hundred and fourteen radiologic science professionals were surveyed, drawn in a randomized design and stratified by specialty/discipline, state and selected municipalities. The sample was drawn from the registrant database of the American Registry of Radiologic Technologists (registrants with active status), which numbered approximately 171,000 when the sample was drawn. The decision to sample 150 radiographers and 150 radiation therapists each by state, and 50 of the remaining specialties/disciplines by state, was based upon an expected return rate of approximately 50 percent (benchmarked by previous ASRT wage and salary studies). A total of 12,525 surveys were returned, yielding a response rate of approximately 42 percent.

The results are reported with weighted data balanced at the state level. These data are weighted to be representative of the distribution of ARRT members across the country when reported in total or at the regional level.

The “typical” registered radiologic technologist responding to the survey was as follows:

- Female (75%);
- Married (70%);
- Holds an associate degree (43%);
- Has been practicing in the profession for 16 years and over 8 years in their current position;
- Is currently practicing in a staff position (59%); and
- Works in one of 3 employment settings: not-for-profit hospitals (47%), clinic/physician’s office (17%) and for-profit hospitals (16%).

The most frequently mentioned certifications were:

- Radiography (48%);
- Radiation Therapy (14%); and
- Mammography (11%).

Registered radiologic technologists are spending most of their workday practicing:

- Radiography (27%)
- Radiation Therapy (22%)
- Mammography (10%).

Other findings include:

- Nationwide, hourly basis wages for full-time registered technologists averaged \$21.26 depending upon discipline, position, worksite, education, years in the profession and other demographic factors.
 - Mean hourly wages were reported highest in Region IX (Arizona, California and Nevada), Region II (New York and New Jersey) and in Region I (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont).
- Nationwide, wages paid on a salary basis for full-time registered technologists averaged \$53,919 depending upon discipline, position, worksite, education, years in the profession and other demographic factors.
 - Mean salary wages tended to be higher in the New England area, West Coast area and the New York/New Jersey area.
- Full-time salary wage technologists are higher paid, are more educated, have worked in the profession longer and have attained higher positions than full-time hourly wage technologists.

INTRODUCTION

The Project

The American Society of Radiologic Technologists (ASRT) is the largest radiologic science organization in the world. Founded in 1920, its membership has grown to almost 90,000. The mission of this organization is to provide its members with educational opportunities, promote radiologic technology as a career and monitor state and federal legislation that affects their profession.

Every few years the ASRT conducts a wage and salary survey of radiologic technologist professionals.

The original objective of this tracking study was to measure income, benefits, satisfaction and other demographics of radiologic technologists at the national level. The purpose of this study was to monitor demographic changes for the radiologic technologist over time.

Methodology

The ASRT Education and Research Department in conjunction with Savitz Research Solutions developed the research methodology and survey questionnaire, conducted the mailing and performed the data analysis. The survey is a four-page booklet and was sent to a sample of radiologic technologists in each of the 50 states with additional sampling in 10 major municipalities. In the previous wave conducted in 1997, a response rate of about 50% was experienced. This is the response rate that was assumed for this wave's design.

On January 19, 2001, the survey instrument was mailed to the sample population along with an explanatory cover letter and a postage-paid return mail envelope. (The cover letter and survey instrument are included in Appendix A). Due to a low response rate among technologists in Nuclear Medicine and Diagnostic Medical Sonography, an additional mailing was sent to them in April of 2001.

Forty-two percent of the sample returned usable surveys. Response rates by state are shown on page 3.

Note: All data is weighted to national ARRT population.

Sample Design

In order to fulfill the purpose of this study and in an effort to reduce possible sample bias and ensure the homogeneity of the technologist population, the decision was made to use the same sampling requirements as the study in 1997. As in 1997 the objective was to have a sample representative of the larger population of technologists, giving ASRT members a proportionately equal chance of being included in relation to the total population of registered technologists.

Once again like 1997, the sample design included 150 respondents in radiography and radiation therapy each (per state) and 50 in the remaining specialties (per state). This sampling decision was based on efficacy and cost. The estimated response rate was approximately 50 percent. The ARRT database was first filtered to include those technologists active in the radiologic sciences. This group was then divided into subsets by state and then by modality (credentials). A random sample of participants was chosen for each group or subset when the sample size was large enough. When numbers were less than 50, the whole subset was included.

In addition to the sample of radiologic technologists in each of the 50 states, an additional sampling in 10 major municipalities was conducted. In the previous wave, 1997, a response rate of about 50% was experienced. This is the response rate that was assumed for this wave's design. The following parameters show the mail out and expected returns of the previous wave and for the current wave.

* A supplemental sample was sent to ten municipalities. Municipalities are specified in parenthesis.

** Surveys were not sent to D.C. However, surveys were returned from respondents living in surrounding states who are working in D.C.

Note: All data is weighted to national ARRT population.

Considerations

Response rates varied by specialty. Responses numbering fewer than 30 from a particular state render less than statistically projectable results for those areas, but data are reported as is. In many cases, fewer than 50 technologists were present in the ARRT registrant database by specialty and state. When fewer than 10 respond, the parameter of the statistic is suspect. It was beyond the scope of this project to resample or follow-up for response. The vacancies in data could become the subject of further research. When looking at the results in total or at the regional level, these results are reported with weighted data. This data is weighted in accordance to be representative of the distribution of ARRT members across the country. Respondents who did not respond to the workplace state question or stated that the District of Columbia (D.C.) was their workplace state were given a weight of 1 in the weighted calculations.

Additionally, the membership of the ASRT (approximately 90,000) represents approximately 53 percent of the registrant database provided by the ARRT (approximately 171,000 filtered). Approximately 60 percent of the survey respondents were members of the ASRT.

This research project follows the 1997 and 1992 Wage and Salary Surveys conducted by the ASRT. Much of the material and structure for the 2001 Survey was based upon the format of the earlier surveys. Ideally, periodic longitudinal measurement of these data variables should be dependent upon substantial change in the technologist marketplace. The rate of change in wages and salaries for radiologic technologists is unknown. Unless other factors intercede, it is anticipated that measurement could be done at three- to four-year intervals. The issue of obtaining more conclusive results in the smaller subgroups would require a change in the data collection design and/or analysis of future projects. The weight given to a respondent, dependent on their workplace state, is shown in Appendix B.

Hourly Wage Respondents vs Salary Wage Respondents

Please note that hourly respondents and annual salary respondents are two different sets of people. When annual salaries are reported, it is not simply a calculation of an annualized hourly rate.

Full-time hourly wage respondents make less than their full-time salary wage colleagues. Even when overtime is accounted for, full-time hourly wage respondents make less than full-time salary wage respondents.

Margin of Error

A total of 12,525 surveys were returned, yielding approximately a 1% margin of error at the 95 percent confidence level. Sample sizes are important when looking at data's statistical significance. Typically, a sample size of at least 30 is needed to have statistical reliability.

Note: All data is weighted to national ARRT population.

The Report

This report summarizes the results for each question in the survey. In addition, as in the 1997 report, wage and salary information is compared by specialty/disciplines. These groups are further divided by job positions, worksites, education, years in the profession and region. Regional data is divided according to the U.S. Census Bureau map of regions.

Topics of Discussion

All wage and salary information reported is based upon an annual minimum workweek of 32 hours. The report reflects wages and salaries as of January 2001.

The tables presented for the question summaries include:

Frequency (the number of responses given for each variable).

Percent (the number of responses for each variable divided by the total number of usable surveys, including missing values).

Valid Percent (the number of responses for each variable divided by the total number of usable surveys, excluding missing values).

Missing (the number of respondents who either did not answer the question or who gave an unusable response).

The data presented for each specialty/discipline includes:

Mean (the arithmetic average; sum of the values of all observations divided by the number of observations)

Median (the value above and below which one-half of the observations fall; 50th percentile)

5th Percentile (the value below which 5% of the cases fall)

95th Percentile (the value above which 95% of the cases fall)

n (the number of respondents)

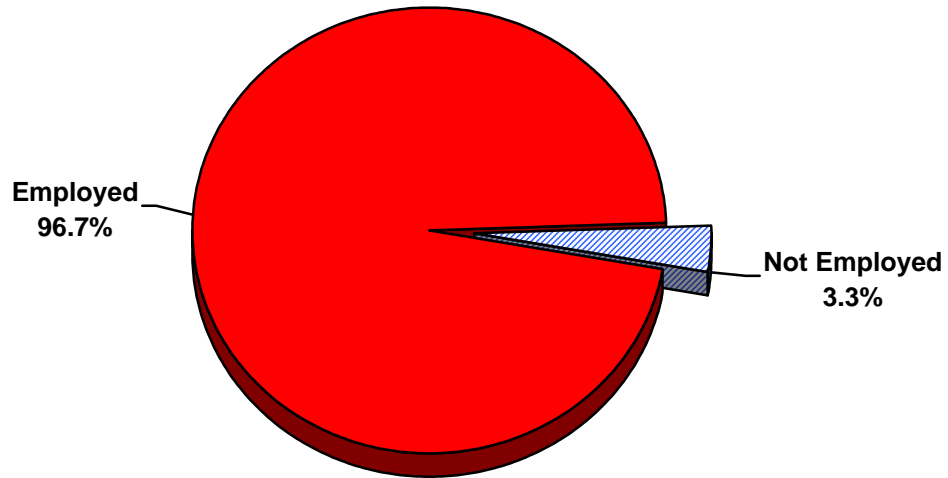

Note: All data is weighted to national ARRT population.

FULL-TIME HOURLY WAGES

The following section details the wages earned by respondents who stated they worked at least 32 hours per week and are paid by the hour.

These wages reflect only the fixed hourly rate of pay. The wages in this report do not include overtime pay and are not annualized. As such, these wages can not be compared to the full-time salary wages detailed later in this report.

Note: All data is weighted to national ARRT population.

COVER LETTER

*The national professional organization representing radiographers, radiation therapists,
nuclear medicine and sonographers*

THE AMERICAN SOCIETY OF RADIOLOGIC TECHNOLOGISTS

15000 Central Ave. SE, Albuquerque, NM 87123-3909 • Phone 505-298-4500 • Fax 505-298-5063

January, 2001

Dear Colleague,

You have been selected to participate in ASRT's 2001 Wage and Salary Survey. This survey will provide up-to-date information on radiologic technologists across the nation.

As a credentialed radiologic science professional, your participation is crucial in establishing a representative sample of the radiologic sciences profession and enabling the ASRT to better represent your profession to industry, government and the general public.

The key to the success of this project is your participation. Because your time is valuable, special emphasis has been placed on keeping the questions short. Your answers will be held in complete confidence. In order to maintain confidentiality of replies, all responses will be grouped together and reported in the form of numbers or percentages.

A summary of the survey results will be published in ASRT's Scanner. The full report will be available for a nominal fee to help defray the costs of conducting this survey.

Please complete the enclosed survey and **return it by February 5, 2001** in the postage-paid envelope provided. Thank you for your participation and support.

If you have any questions regarding this survey, please contact the Research Consultant we have contracted to conduct this study, Savitz Research Solutions. The contact person at Savitz Research Solutions is David Ditzenberger. His telephone number is 972-386-4050 ext. 294.

Sincerely,

Sal Martino
Vice President of Education and Research
American Society of Radiologic Technologists

ASRT WAGE & SALARY SURVEY 2001

PLEASE ANSWER ALL QUESTIONS IN TERMS OF YOUR JOB IN RADIOLOGIC SCIENCES ONLY.
DO NOT INCLUDE OTHER JOBS YOU MAY HAVE.

1. Are you presently employed in the radiologic sciences?

- ₁ Yes (*Skip to Question 3*) ₂ No (**PLEASE ANSWER QUESTIONS 2 THRU 7 ONLY AND RETURN THE SURVEY.**)

2. If not, why has your employment status changed? (**SELECT ONLY ONE**)

- ₁ Position was eliminated due to downsizing
₂ Was laid off; looking for another position in the radiologic sciences
₃ Left to find a more lucrative position within the radiologic sciences
₄ Left to find a position in a different field
₅ Relocated to another area and am looking for a position within the radiologic sciences
₆ Relocated and am looking for a position in a different field
₇ Left to go back to school
₈ Left to take care of children full-time
₉ Retired
₁₀ Other (Please Specify) _____

3. In which employment setting do/did you practice most of your time? (**SELECT ONE ONLY**)

4. How long have/had you practiced in the radiologic sciences? (*Do not include number of years for preparatory education*)

_____ years
(Round to nearest full year)

5A. In which of the following disciplines or specialties are/were you credentialed?

5B. Please indicate in which discipline you practice(d) most of your time.

(PLEASE ANSWER BOTH 5A AND 5B.)

5A. I am/was credentialed in:
(SELECT ALL THAT APPLY)

- ₁ Radiography
- ₂ Radiation Therapy
- ₃ Nuclear Medicine
- ₄ Diagnostic Medical Sonography
- ₅ Mammography
- ₆ Cardiovascular Interventional Technology

STATE WEIGHTS

In January of 2001, the total number of radiologic technologists (R.T.) registered with the American Registry of Radiologic Technologists (ARRT) was 171,188.

In the 2001 ASRT Survey, 10,861 of the surveys that were returned listed the state where the respondent is working. Each respondent with a "state" response was assigned a level of representation ("state weight") that corresponded with the percentage of registered radiologic technologists in that state. All of the responses of that respondent was then multiplied by the "state weight" in order to show responses that are representative of the entire country. Respondents who did not list the state where they are working or who listed "District of Columbia" were given a neutral weight of "1". The state "weights" are as follows:
